ClawMetry

The Datadog for AI Agents

Real-time observability for OpenClaw AI agents. See what your agents are doing, how much they cost, and whether they're working — from anywhere.

THE OPPORTUNITY

OpenClaw hit 220k stars in 3 months

OpenClaw is the fastest-growing open source project of 2026. Millions of people are running personal AI agents for the first time. Developers, solopreneurs, enterprises — everyone is deploying agents that browse, code, email, and execute commands autonomously.

326k+
OpenClaw GitHub stars in 3 months

2.5M+
Monthly npm downloads

$0
Observability tooling exists for this ecosystem today

THE PROBLEM

Agents are running blind

You set your AI agent to work, go on vacation, and come back to discover it spent $200 on API calls, filled your inbox with draft emails, and ran 47 bash commands on your machine. You have no idea what happened or why.

🔍

No visibility

No way to see what the agent is doing, has done, or is about to do

💸

No cost control

Token spend is opaque — bills arrive before you notice a runaway agent

🔐

No security audit

Agents have full system access — no audit trail of what they touched

📱

No remote access

Dashboard only works on the local machine where the agent runs

THE SOLUTION

ClawMetry: full visibility, anywhere

ClawMetry gives you a real-time dashboard of everything your AI agents are doing — token costs, live flow visualization, tool call history, memory browser, sub-agent trees. Open source locally, cloud-synced with E2E encryption for anywhere access.

⚡ **Flow Tab — Live agent visualization**
Watch every tool call, sub-agent spawn, and message in real time as your agent works

🧠 **Brain Tab — Full thought and action transcript**
Every tool call, decision, and output — searchable, filterable, timestamped

💰 **Tokens Tab — Per-session cost breakdown**
Know exactly how much each session costs before your bill arrives

🔐 **E2E Encrypted Cloud Sync**
Data encrypted on your machine before upload — only you can read it in the browser

TRACTION

75,000 installs. Zero marketing spend.

75k+
Total installs (pip + curl) since Feb 18, 2026

~20k
New installs per week, growing

100+
Countries with active installations

Growth driven entirely by word-of-mouth in the OpenClaw community (r/openclaw, Discord, Twitter)

CLOUD LAUNCH — MARCH 18, 2026

From open source to SaaS, in 3 weeks

OPEN SOURCE (FREE)

75k+

pip install clawmetry

- ✓ Local dashboard
- ✓ All 7 tabs
- ✓ Full feature set
- ✓ Free forever

CLOUD (PAID)

$5 / node / month

7-day free trial, no CC required

- ✓ Access from any device
- ✓ E2E encrypted sync
- ✓ Multi-node fleet view
- ✓ Cloud-hosted on GCP

2 weeks
Beta → full launch

BUSINESS MODEL

Open source funnel to cloud revenue

pip install → Local dashboard → clawmetry connect → **$5/node/mo**

Free Tier

Full local dashboard, forever free. OSS flywheel drives installs and word of mouth.

Pro: $5/node/mo

Cloud sync, multi-device access, fleet view. 7-day trial, no CC. Scales with usage.

Enterprise (2027)

SSO, audit logs, compliance, multi-team, private cloud deployment. Custom pricing.

Path to $1M ARR: If 1% of 56k installs convert to cloud at $5/mo average 3 nodes = 560 paying customers × $15/mo = **$100k ARR**. 10% conversion = $1M ARR. Industry SaaS conversion from OSS is typically 3-8%.

MARKET

A new category being created right now

TOTAL ADDRESSABLE MARKET

$12B

AI observability and monitoring market by 2028 (growing 40% YoY). Includes LLMOps, agent monitoring, AI cost management.

SERVICEABLE MARKET (OPENCLAW)

$50M+

326k+ GitHub stars → millions of deployments. If 5% of OpenClaw users pay $5/node/mo across 3 nodes.

Why now?

🚀 OpenClaw hit 220k stars in 3 months — fastest-growing OSS project of 2026. The category is exploding.

🏦 No observability tools exist for OpenClaw specifically. ClawMetry has first-mover advantage with deep ecosystem integration.

📈 Enterprise adoption of personal AI agents is accelerating. Compliance and audit requirements make observability non-negotiable.

FOUNDER

Built by someone who ships

Vivek Chand

Founder & CEO, ClawMetry

Senior Engineer at Booking.com leading AI in Customer Service — managing 15,000+ agent systems at scale.

Previously built ClassKlap (500k+ students, acquired).

Based in Amsterdam. Shipped ClawMetry from 0 to 56k installs in 4 weeks with zero marketing.

Production AI at scale

Day job: running AI agents for millions of Booking.com customers. ClawMetry solves problems Vivek faces at work every day.

Previous exit

ClassKlap — edtech product used by 500k+ students. Sold. Knows what it takes to build and grow.

Deep ecosystem credibility

Trusted builder in the OpenClaw community. Direct access to 326k+ potential customers.

USE OF FUNDS

$500k - $1M to reach $1M ARR

Product & Engineering — **45%**
Second engineer (full-stack), enterprise features, mobile app, API ecosystem

GTM & Community — **25%**
OpenClaw community partnerships, developer relations, content, affiliate program

Infrastructure — **15%**
GCP Cloud SQL, Cloud Run scaling, SOC2 compliance, security audit

Operations & Runway — **15%**
18 months runway, legal (EU entity), accounting, tooling

12-month milestones: 500 paying customers · $75k MRR · Enterprise beta with 5 design partners · Mac app v2 · Mobile app

THE ASK

$750k

Pre-seed

18 months runway to go from product-market fit to $1M ARR. The install base is already there. Now we convert.
